

**e-Watch® SiteWatch can use a remote network storage resource for image archiving. The remote network storage resource must be referenced by a Universal Naming Convention (UNC) name (for example, \\server\folder).**

Use the e-Watch Server Application program to change the registry values **ImageRoot** and **RetrievedRoot**. Set these registry values to the UNC path names of the desired folders on the remote network storage resource.

Use the Windows Service Manager program to change the logon account for the **e-Watch Service**. The logon account must have the “Log on as a service” policy on the e-Watch server. The logon account must also have read and write privileges on the remote network storage resource.

Use the Windows Internet Service Manager program to change the virtual directories named **ewatchimages** and **ewatchretrievedimages**. Click the radio button to specify that the content should come from “A share located on another computer”. The Local Path for each virtual directory should be the UNC path name of the desired folder on the remote network storage resource. Click the “Connect As” button and enter a username and password with read and write privileges on the remote network storage resource.
